DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: Page 9 line 3 refers to fig. 2a whereas apparently Fig. 2 is intended..

Appropriate correction is required.

Drawings

The drawings are objected to because the specification page 23 lines 16-21 suggests a further processing step (S7?) in Fig. 6 whereas Fig. 6 in this location has an undiscernible legend.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Art Unit: 3737

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 and 7 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims [3,6] and [(4,6), 7] of U.S.

Art Unit: 3737

Patent Nos. 6709393 and 6881189 respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because the aforementioned patents are claiming the apparatus and method claim feature where, during the calibration mode the at least some photodetectors of the same photodetector set(s) which are used later in the processing mode are also used to calibrate the device so as to identify the wavelengths best usable as the first and second wavelengths of photodetectors in the processing mode. Therefore when the current application base claims use claims' language '...on the basis of a detection result (relationship) of said first photodetection means' this is readable against the sequential sending of signals first to calibration detection and later to processing detection in both cases using plural selected photodetectors.

Allowable Subject Matter

Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
